

Social Media Usage Analysis Project

Business Problem Statement

Analyze social media adoption trends across countries to identify high-growth markets, low-adoption regions, and factors influencing usage levels.

Objectives

- Identify countries with highest social media users
- Identify countries with highest adoption percentage
- Categorize countries by adoption level
- Find growth opportunities
- Provide business recommendations

SQL Analysis Completed

Country-wise user analysis, adoption ranking, adoption categorization, and growth opportunity identification.

Python Analysis

Use Pandas for data cleaning, adoption classification, top-country analysis, and visualization.

Key Findings

China has the largest user base. Saudi Arabia shows one of the highest population penetration rates. India has significant growth potential due to a large population and moderate adoption percentage.

Recommendations

- Expand marketing in low-adoption countries
- Increase localized content
- Support mobile-first engagement
- Improve digital accessibility
